

Engineering Workflow Inspection Report

Inspection Date: 2026-05-22

System: MinerU Data Agent processing line

1. Workflow Diagram

2. Execution Matrix

Step	Input	Tool	Expected Output	Recovery Rule
1	PDF upload	API layer	stored file	reject oversize input
2	document	MinerU CLI	markdown and content list	retry online API
3	content blocks	validator	quality report	mark needs_review
4	markdown	retrieval exporter	jsonl chunks	skip noisy blocks

3. Findings

Anomaly: a previous API smoke sample was too short and triggered a quality warning

Recommendation: use richer smoke inputs and keep warnings visible in the result

4. Review Targets

Check that every run has result.json, trace.json, summary.md, and retrieval artifacts.
